

USB DATA PROTECTOR

CHARGE SAFELY - PROTECT YOUR DATA!

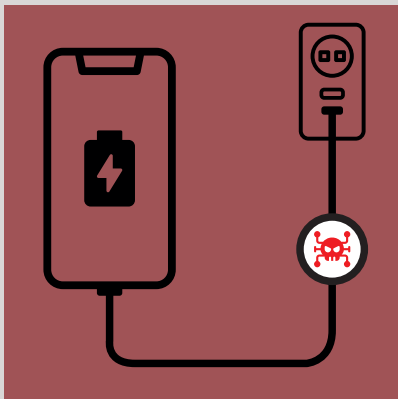

The USB data protector avoids accidental data exchange when you plug in your mobile device to your computer or public charging station.

The item will block any data transfer between both devices while keeping sure the item is still being charged. This prevents data being stolen from your device or malware being installed on it.

The USB data protector is compatible with all mobile devices (iOS Android, Windows) and works on all USB ports. ABS material.

WHY DO I NEED IT?

JUICE JACKING

A type of cyber attack involving a charging port that doubles as a data connection, typically over USB. This often involves either installing malware or surreptitiously copying sensitive data from a smart phone, tablet, or other computer device.

MALWARE

Any software intentionally designed to cause damage to a computer, server, client, or computer network. This can be installed by data exchange when your device is plugged into someone else's computer or a public charging station.

BadUSB SOLUTION

An attacker will take a regular USB hardware which contains a small microprocessor, manipulate the firmware (which is actually a small operating system for the microcontroller to work) and infect it with malware.

WHERE DO I NEED IT?

PUBLIC CHARGING AREAS

AIRPORTS, AIRPLANES, TRAINS & HOTELS

CONNECTED TO OTHER LAPTOPS OR AT THE OFFICE
