Portable UV-C steriliser pouch with integrated battery

How does UV-C sterilisation work?

UV-C light damages the DNA of microorganisms. This renders the microorganisms (bacteria or fungi) harmless. UV-C is therefore also used, for example, to sterilise surgical instruments.

Is UV-C safe for people?

With our products, you are not exposed to UV-C light; they are completely safe to use.

Can I sterilise everything with UV-C?

You can sterilise all items which you use every day and which fit into the UV-C boxes and pouches, such as mouth masks, telephones, keys, etc.

If you sterilise your facemask, is it safe to use?

Yes, it is. After sterilisation your facemask is 99,9% free of bacteria.
