

What is Recycled PP?

Recycled Polypropylene, commonly known as Recycled PP, is one of the most widely used food-contact material and used in variety of other applications around the world. We use recycled PP material that mainly comes from food containers, packaging, housing of electric & electronic products; such as refrigerator, microwaves, printers, and so on.

Once these products are discarded, the waste is collected, washed and shredded to produce recycled PP material, which is then reused to make new products.

Advantages recycled PP vs. virgin PP

- 

Reduce waste
Recycling PP helps to reduce the amount of plastic that ends up in landfills or the ocean. When plastic is thrown away, it can take hundreds of years to break down, which is really bad for the environment.
- 

Impact
Recycled Polypropylene saves about 50% of CO2-emissions, compared to conventional Polypropylene

Certified

Our recycled PP products have the RCS or GRS certification. **The Recycled Claim Standard (RCS)** verifies the percentage of recycled material and tracks it from the source to the final product

The Global Recycled Standard (GRS) verifies (the percentage of) recycled material and tracks it from the source to the final product.

GRS-certified recycled PP
water bottle with handle

GRS-certified recycled PP
SS mug with handle

GRS-certified recycled PP
