REMARK	<p>Printing on hairy fabric surfaces is technically possible, but the print result is not satisfactory (uneven printed surface, risk of print cracking, flattend shiny fabric surface after heat press, etc.)</p> <p>Therefore we do not recommend to print on hairy fabric surfaces unless this "broken" look is intentional.</p>			N/A	<p>direct embroidery                      patched embroidery                      3D embroidery                      woven label, etc.</p>
